

ULD® BP-100

ULD® BP-100 Contact Insecticide II fogging concentrate contains the synergized, botanically based insecticide pyrethrins. Pyrethrins are effective against a wide range of pests affecting livestock including horn flies, house flies, stable flies, gnats and blood sucking lice. The oil-based fogging concentrate can be used while animals are present which reduces the stress on animals resulting from moving them to other areas and saves time.

- Can be used full strength or diluted in a variety of ULD application equipment such as the Micro-Injector and other ULD equipment designed for crack and crevice, space and contact spray
- For use on and over animals
- Combines 1% active ingredient pyrethrum with synergist piperonyl butoxide (PBO) for enhanced control
- Authorized for use in federally inspected meat and poultry plants for broad spectrum control of listed crawling and flying insects found in food-handling areas

Package Sizes Available:

- 1 Gallon (4 per case)
- 55 Gallon drum
